

# Contents

<b>Preface</b>	<b>xi</b>
<b>Notation</b>	<b>xiii</b>
<b>Getting Started with the MATLAB Exercises</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
<i>P. C. Hansen, J. S. Jørgensen, W. R. B. Lionheart</i>	
1.1 A Little History . . . . .	2
1.2 Tomography Today . . . . .	3
1.3 Aim and Contents of This Book . . . . .	5
<b>2 Just Enough Analysis: Functions, Operators, and Inverse Problems</b>	<b>9</b>
<i>W. R. B. Lionheart</i>	
2.1 Setting the Stage . . . . .	10
2.2 Inverse Problems and Regularization . . . . .	15
2.3 The Fourier Transform . . . . .	22
<b>3 Just Enough Linear Algebra</b>	<b>27</b>
<i>P. C. Hansen</i>	
3.1 Systems of Linear Equations . . . . .	27
3.2 Linear Least-Squares Problems . . . . .	30
<b>4 Just Enough Physics</b>	<b>35</b>
<i>J. Sijbers, J. S. Jørgensen</i>	
4.1 Fundamentals of X-Rays . . . . .	35
4.2 Interaction with Matter . . . . .	39
4.3 Detection of X-Rays . . . . .	46
4.4 Photon Noise . . . . .	48

4.5	Scan Geometries . . . . .	52
	Exercises . . . . .	53
<b>5</b>	<b>The Radon Transform</b>	<b>55</b>
	<i>J. S. Jørgensen, W. R. B. Lionheart</i>	
5.1	Introducing the Radon Transform . . . . .	55
5.2	Basic Properties of the Radon Transform . . . . .	59
5.3	Radon Transform of Simple Geometric Shapes . . . . .	61
5.4	Meet the Sinogram . . . . .	65
5.5	Into 3D: The X-Ray Transform . . . . .	68
	Exercises . . . . .	70
<b>6</b>	<b>Filtered Back-Projection</b>	<b>73</b>
	<i>J. S. Jørgensen, W. R. B. Lionheart</i>	
6.1	Back-Projection . . . . .	73
6.2	Fourier Slice Theorem: Key to Reconstruction . . . . .	76
6.3	The Filtered Back-Projection Method . . . . .	79
6.4	The Inverse of the Radon Transform . . . . .	87
6.5	Back-Projection as the Adjoint . . . . .	88
6.6	Stability and Consistency . . . . .	89
6.7	Reconstruction for Fan-Beam Data . . . . .	93
6.8	Reconstruction in 3D with Complete and Cone-Beam Data* . . . . .	94
	Exercises . . . . .	99
<b>7</b>	<b>Singular Values and Functions of the Radon Transform</b>	<b>105</b>
	<i>P. C. Hansen, W. R. B. Lionheart</i>	
7.1	Singular Values and Functions . . . . .	105
7.2	Derivation of the Singular System for the Radon Transform* . . . . .	114
	Exercises . . . . .	120
<b>8</b>	<b>Limited-Data Tomography</b>	<b>123</b>
	<i>E. T. Quinto</i>	
8.1	Filtered Back-Projection on Completed Data . . . . .	125
8.2	Categorizing Singularities and Features of Objects . . . . .	126
8.3	Visible and Invisible Singularities of the Object . . . . .	128
8.4	Object-Dependent Artifacts: Artifact Lines Tangent to Boundaries in the Object . . . . .	129
8.5	Object-Independent Artifacts . . . . .	131
8.6	Putting It All Together . . . . .	135
8.7	Another View on Ill-Posedness* . . . . .	138
8.8	Artifact-Reduced FBP on Completed Data . . . . .	138

8.9	Other Algorithms . . . . .	140
8.10	A Brief Introduction to Microlocal Analysis* . . . . .	142
	Exercises . . . . .	147
<b>9</b>	<b>Discretization Models and the System Matrix</b>	<b>155</b>
	<i>K. J. Batenburg, P. C. Hansen, J. S. Jørgensen</i>	
9.1	Discretization of Images . . . . .	155
9.2	Pixels and Discrete Images . . . . .	157
9.3	Projection Models . . . . .	159
9.4	The System Matrix and Its Properties . . . . .	167
9.5	Using the System Matrix . . . . .	174
	Exercises . . . . .	179
<b>10</b>	<b>SVD Analysis of Tomography Problems</b>	<b>183</b>
	<i>P. C. Hansen</i>	
10.1	The Singular Value Decomposition . . . . .	183
10.2	Ill-Conditioned Problems and Noisy Data . . . . .	189
10.3	Spectral Filtering . . . . .	191
10.4	SVD Analysis of Discretized CT Problems . . . . .	194
10.5	The Role of the Null Space in Tomography . . . . .	202
	Exercises . . . . .	205
<b>11</b>	<b>Algebraic Iterative Reconstruction Methods</b>	<b>211</b>
	<i>P. C. Hansen</i>	
11.1	Iterative Solvers . . . . .	213
11.2	Noisy Data and Semiconvergence . . . . .	223
	Exercises . . . . .	239
<b>12</b>	<b>Regularization Techniques for Tomography Problems</b>	<b>251</b>
	<i>Y. Dong</i>	
12.1	Why Do We Need Regularization? . . . . .	251
12.2	Tikhonov Regularization . . . . .	252
12.3	Tikhonov Regularization in General Form . . . . .	261
12.4	Sparsity Regularization . . . . .	263
12.5	Total Variation Regularization . . . . .	265
	Exercises . . . . .	269
<b>13</b>	<b>Optimization Methods for Tomography</b>	<b>275</b>
	<i>M. S. Andersen</i>	
13.1	The Gradient Method . . . . .	275
13.2	Step Sizes and Stopping Criteria . . . . .	292

---

13.3	Gradient Methods for Constrained Optimization . . . . .	300
13.4	Regularized Least Squares . . . . .	305
	Exercises . . . . .	312
<b>14</b>	<b>Looking Ahead</b> . . . . .	<b>317</b>
	<i>P. C. Hansen, J. S. Jørgensen, W. R. B. Lionheart</i>	
	<b>Bibliography</b> . . . . .	<b>319</b>
	<b>Index</b> . . . . .	<b>333</b>

# List of Contributors

Martin S. Andersen  
*Department of Applied Mathematics  
and Computer Science  
Technical University of Denmark*

Jakob Sauer Jørgensen  
*Department of Applied Mathematics  
and Computer Science  
Technical University of Denmark*

K. Joost Batenburg  
*Leiden Institute of Advanced Computer  
Science (LIACS)  
Leiden University*

William R. B. Lionheart  
*Department of Mathematics  
The University of Manchester*

Yiqiu Dong  
*Department of Applied Mathematics  
and Computer Science  
Technical University of Denmark*

Eric Todd Quinto  
*Department of Mathematics  
Tufts University*

Per Christian Hansen  
*Department of Applied Mathematics  
and Computer Science  
Technical University of Denmark*

Jan Sijbers  
*Department of Physics  
University of Antwerp*
