

**Opgave 28: Writing to a file**

Write a program that writes two arrays of integers to the file `data.txt`. One array on each line, the numbers should be separated by spaces, e.g. `2 3 1`. Let the two arrays contain 10 integers of your choice!

**Opgave 29: Reading from a file**

Write a new program that can read the two arrays from `data.txt` into two arrays of length 10. The program should contain exception handling. **Hint:** Use `StringTokenizer`
