\$Revision: 1.42 \$  
\$Date: 2009/03/19 21:39:06 \$

## Abstract

References for *independent component analysis* (ICA) applied in functional neuroimaging are collected. Functional neuroimaging here includes functional magnetic resonance imaging (fMRI), positron emission tomography (PET), electroencephalography (EEG) and magnetoencephalography (MEG).

The original URL to this document is

- PDF: <http://www.imm.dtu.dk/~fn/bib/Nielsen2001BibICA.pdf>
- PostScript: <http://www.imm.dtu.dk/~fn/bib/Nielsen2001BibICA.ps>
- HTML: <http://www.imm.dtu.dk/~fn/bib/Nielsen2001BibICA/>.

This structured bibliography is part of a larger collection of bibliographies that was begun in 2001 see <http://www.imm.dtu.dk/~fn/bib/Nielsen2001Bib/>. The bibliography is written in L<sup>A</sup>T<sub>E</sub>X and BIBTeX and should be available both as HTML and PostScript.

The bibliography is probably far from complete, but new references are added whenever the author finds new material and has the time to add them. You can email the author if corrections are required or you have found some references that you feel ought to be included: fn@imm.dtu.dk.

Note that there is an index at the very end of this document.

Thanks to Evan D. Morris. Funding through Lundbeck Foundation, EU project MAPAWAMO, International Neuroimaging Consortium (INC) American HBM project and Danish THOR Center for Neuroinformatics.

## 1 General references

A general introduction is (Hyvärinen and Oja, 2000). A list of papers from the Third International Conference on Independent Component Analysis and Signal Separation (ICA2001) is available from <http://ica2001.org>.

### 1.1 Neuroimaging

Overviews of ICA for neuroimaging are available in (McKeown et al., 2003; Calhoun et al., 2003) for functional magnetic resonance imaging (fMRI), and Stone (2002) discuss ICA for EEG, fMRI and optical imaging.

## 2 Methods

- Independent component analysis

- “Bell and Sejnowski ICA” (BS-ICA) — “Infomax” (Bell and Sejnowski, 1995).
- \* “Maximum likelihood ICA” (MacKay, 1999; Lee et al., 1999). (Usually) the same as infomax but developed from maximum likelihood rather than information theory with the sources as, e.g., hyperbolic secant distributions.
- “Extended infomax” (Lee et al., 1999) is able to model heavy- and light-tailed distributions.
- ‘Probabilistic ICA’ (PICA) or ‘Noisy ICA’ (Beckmann et al., 2001a), (Kolenda, 2002, section 3.3 and 3.6)

$$\mathbf{X} = \mathbf{SA} + \mathbf{U}. \quad (1)$$

The noise is usually assumed to be isotropic Gaussian distributed  $\mathbf{u} \sim \mathcal{N}(\mathbf{0}, \sigma^2 \mathbf{I})$ . A similar noise assumption is made in ‘probabilistic principal component analysis’ (PICA) — a special factor analysis model — where model selection can be based on AIC and test set (Hansen et al., 1997, 1999a), Minka, Bishop, Zoubin G.

- FastICA (Hyvärinen, 1999; Hyvärinen and Oja, 2000)
- Mean field ICA (MF-ICA) (Højen-Sørensen et al., 2002, 2001).
- Decorrelation methods — Dynamic component analysis (DCA)
  - Molgedey-Schuster (MS-ICA) (Molgedey and Schuster, 1994). Probabilistic Molgedey-Schuster ICA: ICA with preliminary PCA and model selection with BIC (Hansen et al., 2001). Min/max autocorrelation factorization (MAF) is related to Molgedey-Schuster ICA (Molgedey and Schuster, 1994). MAF was originally described in (Switzer and Green, 1984; Green et al., 1988) and other descriptions are by Conradsen et al. (1986) and Nielsen (1994).
  - Georgiev and Cichocki (2001)
  - Dynamic component analysis (Attias and Schreiner, 1998, 1997)
  - ‘Hansen convolutive ICA’ — ‘Convolutive independent component analysis by prediction’ (CI-CAP) (Hansen, 2003; Hansen and Dyrholm, 2003).

## 2.1 Methods in functional neuroimaging

Table 1 displays some of the ‘methods’ papers in ICA for functional neuroimaging.

Hansen (1998) develops noisy ICA with a mean field approximation and applies it together with PCA on an fMRI data set.

### 2.1.1 fMRI ICA for multiple subjects

Multisubject data may be analyzed in a variety of ways (Calhoun et al., 2008; Schmitthort and Holland, 2004):

- Pre-average data and then perform a single ICA (Schmitthort and Holland, 2004).
- Perform single subject ICAs and then combine or correlate the subject specific independent component with each other (Calhoun et al., 2001b).
- ICA with temporal concatenation. Here the subjects need to be in the same space, i.e., spatially normalized.
- ICA with spatial concatenation. Here the design in the temporal dimension need to be the same, e.g., the stimulus need to occur at the same time point across subjects
- Tensor-methods, e.g., PARAFAC.

A comparison on simulated data is reported in (Schmitthort and Holland, 2004).

Modality	ICA Type	Purpose	Reference
fMRI	sICA		(McKeown et al., 1998b)
fMRI	sICA		(McKeown et al., 1998a)
fMRI		Demonstration of estimation of noisy ICA with mean field approximation	(Hansen, 1998)
fMRI	tICA		(Biswal and Ulmer, 1999)
fMRI	stICA		(Muraki and Nakai, 1999)
fMRI		Comparison of different analysis methods	(Lange et al., 1999)
fMRI		Separate task and non-task	(Ulmer and Biswal, 2000)
fMRI	sICA(?)	Separation of task-related and head movement signal	(Netsiri et al., 2000)
fMRI			(Matsuo et al., 2000)
Dynamic PET	sICA (McKeown)	Determination of arterial input function	(Jang et al., 2000)
fMRI	sICA, tICA (Fast-ICA)	Investigates sICA and tICA capability to separate paradigm signal	(Calhoun and Pekar, 2000)
fMRI	sICA with FastICA	Artifact detection: Gradient waveform corruption, bistable mean signal intensity change, Nyquist ghosting, high frequency, motion	(Beckmann et al., 2000a)
EEG			(Jung et al., 2001)
fMRI	sICA, tICA, stICA	Comparison of different ICA methods	(Caprihan and Anderson, 2001)
fMRI		Model selection	(Beckmann et al., 2001a)
fMRI	FastICA	Compares ICA with GLM modeling	(Beckmann et al., 2001b)
fMRI		Compared ICA with GLM modeling	(Calhoun et al., 2001b)
fMRI		Identification of motion artifacts	(Bannister et al., 2001)
fMRI	?	Group inference	(Calhoun et al., 2001a)
fMRI	sICA	Artifact detection	(Chuang and Chen, 2001)
fMRI	sICA infomax	Investigation of variation in the hemodynamic response function	(Duann et al., 2002a, 2001b,a)
efMRI	stICA	with “skewed probability density functions”	(Stone et al., 2002)
fMRI	Complex Infomax		(Calhoun et al., 2002b,c,a; Calhoun and Adali, 2002)
pMRI			(Tasciyan et al., 2001)

Table 1: Independent component analysis in functional neuroimaging. sICA is spatial ICA, tICA is temporal ICA and stICA is spatiotemporal ICA.

### 2.1.2 Comparisons

Petersen et al. (2000) and Petersen (2000) compared spatial and temporal ICA with the infomax, DCA and Molgedey-Schuster (MS-ICA): MS-ICA was found to be much faster than BS-ICA and DCA and DCA much slower. BS-tICA and MS-sICA both had difficulties in separating the ‘interesting’ component. Esposito et al. (2002) compared the Bell and Sejnowski (1995) algorithm with the Hyvärinen (1999).

### 3 Tools in functional neuroimaging

Table 2 display some of the programs that are in use for independent component analysis of brain signals.

Tool	Implementation	Description	Reference
AnalyzeFMRI	R	FastICA implementation(?)	<a href="http://www.stats.ox.ac.uk/~marchini/software.html">http://www.stats.ox.ac.uk/~marchini/software.html</a>
BrainVoyager	Compiled for Windows, UNIX, Linux, Mac	“Cortex-based ICA”	<a href="http://www.brainvoyager.com/">http://www.brainvoyager.com/</a>
EEGLAB	Matlab	EGG processing including ICA with GUI. Related to FMRLAB.	(Delorme and Makeig, 2003), <a href="http://www.sccn.ucsd.edu/eeglab/">http://www.sccn.ucsd.edu/eeglab/</a>
FMRLAB	Matlab	Extended Infomax Algorithm	<a href="http://www.sccn.ucsd.edu/fmrlab/">http://www.sccn.ucsd.edu/fmrlab/</a> , (Duann et al., 2002b; Bell and Sejnowski, 1995; Amari, 1999; Lee et al., 1999)
GIFT	Matlab	“Group ICA of fMRI Toolbox”	(Egolf et al., 2004), <a href="http://icatb.sourceforge.net/">http://icatb.sourceforge.net/</a>
ICA:DTU toolbox	Matlab	Implements Bell and Sejnowski Maximum likelihood (Infomax) ICA and Mean Field ICA as well as Molgedey-Schuster ICA. With model selection.	<a href="http://mole.imm.dtu.dk/toolbox/ica/">http://mole.imm.dtu.dk/toolbox/ica/</a> , (Kolenda et al., 2000; Petersen et al., 2000; Hansen et al., 2001, 2000; Kolenda et al., 2001; Højen-Sørensen et al., 2002)
Lyngby	Matlab	The Bell-Sejnowski and Molgedey-Schuster algorithms are presently implemented	(Hansen et al., 1999b), <a href="http://hendrix.imm.dtu.dk/software/lyngby/">http://hendrix.imm.dtu.dk/software/lyngby/</a>
MELODIC	C	Part of FSL. Model order selection (number of sources). Inference on image map with mixture modelling	<a href="http://www.fmrib.ox.ac.uk/fsl/melodic2/">http://www.fmrib.ox.ac.uk/fsl/melodic2/</a> (Beckmann et al., 2000a,b, 2001a,b; Beckmann and Smith, 2002a,b, 2003)

Table 2: ICA tools in functional neuroimaging.

Apart from those listed in the table there are other programs that is not specifically targeted for neuroimaging applications, e.g., ICALAB (<http://www.bsp.brain.riken.jp/ICALAB/>).

## 4 Application

Area	Type	Description	Reference
EEG	tICA		(Makeig et al., 1997)
Visual-Perception Task		GLM used in the same study	(Calhoun et al., 2001b)
ERP/EEG		ERP linked to phase resetting in the alpha rhythm	(Makeig et al., 2002, 2001)
fMRI	Bell and Sejnowski ICA	Dynamic complex visual scenes	(Zeki et al., 2003)

Table 3: Application

(Makeig et al., 2002, 2001) used ICA to show that event-related potentials (ERPs) are linked to “stationary” EEG (alpha) activity of the brain through “partial phase resetting of the EEG processes”.

A further ICA application is (Moritz et al., 2005).

## 5 Unclassified
