02226: High-Performance Operating Systems
Exercise sheet 2

Robin Sharp

Autumn 2004

This is an exercise related to job and resource management in a practical, existing Grid environment: NorduGrid. You are required to investigate which of the job and resource management services discussed in Chapters 20 and 21 og Buyya's book are available in NorduGrid.

You can find a lot of relevant information on NorduGrid's documentation page:

`http://www.nordugrid.org/papers.html`

However, since NorduGrid uses Globus, you may also need to look at:

`http://www.globus.org/`

to discover how Globus-based systems work. (Buyya Section 7.4.2 has some information about this, but not many details.)
